

Oncternal Therapeutics to Participate in September Investor Conferences

September 9, 2021

SAN DIEGO, Sept. 09, 2021 (GLOBE NEWSWIRE) -- Oncternal Therapeutics, Inc. (Nasdaq: ONCT), a clinical-stage biopharmaceutical company focused on the development of novel oncology therapies, today announced that management will participate in the following conferences in the month of September:

- H.C. Wainwright 23rd Annual Global Investment Conference (Virtual) on Monday, September 13 at 7:00am ET
- Oppenheimer Fall Healthcare Life Sciences & MedTech Summit (Virtual) on Wednesday, September 22 at 11:35am ET
- Cantor Global Healthcare Conference (Virtual) on Wednesday, September 29 at 11:20am ET

Links to the webcasts along with replays will be accessible on the Events & Presentations page of the Investors section on the Company's website at investor.oncternal.com.

About Oncternal Therapeutics

Oncternal Therapeutics is a clinical-stage biopharmaceutical company focused on the development of novel oncology therapies for the treatment of cancers with critical unmet medical need. Oncternal focuses drug development on promising, yet untapped biological pathways implicated in cancer generation or progression. The clinical pipeline includes [cirmtuzumab](#), an investigational monoclonal antibody designed to inhibit the ROR1 pathway, a type I tyrosine kinase-like orphan receptor, that is being evaluated in a Phase 1/2 clinical trial in combination with ibrutinib for the treatment of patients with mantle cell lymphoma (MCL) and chronic lymphocytic leukemia (CLL) and in an investigator-sponsored, Phase 1b clinical trial in combination with paclitaxel for the treatment of women with HER2-negative metastatic or locally advanced, unresectable breast cancer, as well as a Phase 2 clinical trial of cirmtuzumab in combination with venetoclax, a Bcl-2 inhibitor, in patients with relapsed/refractory CLL. Oncternal is also developing a chimeric antigen receptor T cell ([CAR-T](#)) therapy that targets ROR1, which is currently in preclinical development as a potential treatment for hematologic cancers and solid tumors. The clinical pipeline also includes [TK216](#), an investigational targeted small-molecule inhibitor of the ETS family of oncoproteins, that is being evaluated in a Phase 1/2 clinical trial for patients with Ewing sarcoma alone and in combination with vincristine chemotherapy. More information is available at <https://oncternal.com>.
