

Oncternal Therapeutics to Participate in the H.C. Wainwright 24th Annual Global Investment Conference

September 7, 2022

SAN DIEGO, Sept. 07, 2022 (GLOBE NEWSWIRE) -- Oncternal Therapeutics, Inc. (Nasdaq: ONCT), a clinical-stage biopharmaceutical company focused on the development of novel oncology therapies, today announced that management will participate in the H.C. Wainwright 24th Annual Global Investment Conference to be held **September 12-14, 2022**.

James Breitmeyer, M.D., Ph.D., Oncternal's President and Chief Executive Officer, will present a corporate overview, which will be available on demand, starting on **Monday, September 12th at 7:00am (ET)**, and the Company will be available for one-on-one meetings.

The webcast will be available online at investor.oncternal.com for up to 30 days.

About Oncternal Therapeutics

Oncternal Therapeutics is a clinical-stage biopharmaceutical company focused on the development of novel oncology therapies for the treatment of patients with cancers that have critical unmet medical need. Oncternal pursues drug development targeting promising, yet untapped biological pathways implicated in cancer generation or progression, focusing on hematological malignancies and prostate cancer. The lead clinical program is [zilovertamab](#), an investigational monoclonal antibody designed to inhibit ROR1, a type I tyrosine kinase-like orphan receptor. Zilovertamab is being evaluated in a Phase 1/2 clinical trial in combination with ibrutinib for the treatment of patients with mantle cell lymphoma (MCL) and chronic lymphocytic leukemia (CLL), in investigator-initiated studies, including a Phase 2 clinical trial of zilovertamab in combination with venetoclax, a Bcl-2 inhibitor, in patients with relapsed/refractory CLL, and in a Phase 1b study of zilovertamab in combination with docetaxel in patients with metastatic castration-resistant prostate cancer (mCRPC). Oncternal is also developing [ONCT-808](#), a chimeric antigen receptor T (CAR-T) cell therapy that targets ROR1, which is currently in advanced preclinical development as a potential treatment for hematologic cancers and solid tumors. The early-stage pipeline also includes [ONCT-534](#), a dual-action androgen receptor inhibitor (DAARI) that is in advanced preclinical development as a potential treatment for castration resistant prostate cancer, including those with clinically important resistance to approved androgen receptor inhibitors.
