

Oncternal Therapeutics to Present in JonesTrading Healthcare Summit

Jul 11, 2024 at 4:05 PM EDT

SAN DIEGO, July 11, 2024 (GLOBE NEWSWIRE) -- Oncternal Therapeutics, Inc. (Nasdaq: ONCT), a clinical-stage biopharmaceutical company focused on the development of novel oncology therapies, today announced that James Breitmeyer, M.D., Ph.D., Oncternal's President and Chief Executive Officer will present at the JonesTrading Healthcare Seaside Summit being held July 14-16, 2024 in San Diego, California.

JonesTrading Healthcare Seaside Summit

Presentation Date and Time: Monday, July 15, 2024 at 2:30pm PT

Webcast Registration: [Link](#)

Please contact your JonesTrading institutional salesperson to participate in the event. Links to the replay will be accessible on the Events & Presentations page of the Investors section on the Company's website at investor.oncternal.com, for at least 30 days after the event.

About Oncternal Therapeutics

Oncternal Therapeutics is a clinical-stage biopharmaceutical company focused on the development of novel oncology therapies for the treatment of patients with cancers that have critical unmet medical need. Oncternal pursues drug development targeting promising, yet untapped biological pathways implicated in cancer generation or progression, focusing on hematological malignancies and prostate cancer. [ONCT-534](#) is an investigational dual-action androgen receptor inhibitor (DAARI) with demonstrated preclinical activity in prostate cancer models against both unmutated androgen receptor (AR), and against multiple forms of AR aberration. It is a potential treatment for patients with mCRPC with unmet medical need because of resistance to androgen receptor pathway inhibitors, including those with AR amplification, mutations in the AR ligand binding domain (LBD), or splice variants with loss of the AR LBD. Study ONCT-534-101 ([NCT05917470](#)) has completed enrollment in six dose cohorts and continues to enroll and dose patients for treatment with mCRPC. [ONCT-808](#) is an investigational autologous chimeric antigen receptor T (CAR T) cell therapy that targets Receptor Tyrosine Kinase-Like Orphan Receptor 1 (ROR1) using the binding domain from zilovetamab. ONCT-808 has demonstrated activity in preclinical models against multiple hematological malignancies and solid tumors and has been shown to be specific for cancer cells expressing ROR1. Oncternal has developed a robust and reproducible manufacturing process that has the potential to reduce the time patients must wait for their individual CAR T therapy to be produced, compared with currently approved CAR T products. Oncternal has dosed patients under Study ONCT-808-101 ([NCT05588440](#)) with relapsed or refractory aggressive B-cell lymphoma, including patients who have failed previous CD19 CAR T treatment. [Zilovetamab](#) is an investigational monoclonal antibody designed to inhibit the function of ROR1. Zilovetamab has been evaluated in a Phase 1/2 Study CIRM-0001 ([NCT03088878](#)) in combination with ibrutinib for the treatment of patients with mantle cell lymphoma (MCL), chronic lymphocytic leukemia (CLL) and marginal zone lymphoma (MZL), which resulted in 100% progression free survival (PFS) at 42 months in CLL patients expressing a p53 mutation/del(17p), a population underserved by current treatment options. Zilovetamab is also being evaluated in an investigator-initiated Phase 1b study of zilovetamab in combination with docetaxel in patients with metastatic castration-resistant prostate cancer ([NCT05156905](#)). More information on our company and programs is available at <https://oncternal.com/>.
